

How to Help NYSCSH Emails From our Health Information Portal Get to YOUR Inbox

Add iContact domains to your safe sender list. This is how to do it in Outlook... your IT folks can help you do it in other email services.

In Outlook Click on Home > Junk > Junk Email Options

You will then see this window. Click on Safe Senders to open that window

In the Safe Senders window click add and type in these names in the window provided. Do this for each one separately, clicking ok after adding each one. Ask your IT folks to whitelist these same names.
